The Role of Sex and Gender in Clinical Practice

Friday, April 28, 2017 | Jefferson Alumni Hall
1020 Locust Street, Philadelphia, PA 19107

This new conference takes a unique approach to patient care by zeroing in on sex differences in non-reproductive areas, such as gastroenterology, cardiology, psychiatry, pulmonology, and nephrology.

Covering a wide range of specialties, this conference:

- Focuses on how major organ systems function differently in men and women, going beyond a basic review physiology
- Highlights differences in clinical presentation of common diseases in men and women
- Provides important information on varying responses to treatment options, looking at both success rates and adverse reactions

By understanding these differences, clinicians will be able to tailor patient care for both men and women, avoiding delays in care and poor outcomes.

Target Audience: Physicians in primary care and internal medicine, nurses and allied health.
