

Learning Objectives for the Inaugural Jefferson Sialendoscopy Course

At the conclusion of this CME activity, participants will be able to:

- Develop strategies to treat and manage salivary gland disorders.
- Examine the advantages of sialendoscopy and identify patients for whom this minimally invasive procedure would be most appropriate.
- Review current evidence based practice guidelines for the appropriate use of sialendoscopy and identify specific strategies to incorporate sialendoscopy and hybrid techniques into practice.
- Demonstrate an understanding of the algorithm for management of stones based on size and location.
- Analyze the proper instrument handling and surgical techniques in sialendoscopy and identify technological advances and their risks and benefits.
- Examine potential complications of sialendoscopy and hybrid approaches and develop the appropriate management plans.
- Assess their individual practice in light of the information and discussions during the course, and identify specific strategies to implement as part of a continuing improvement process for their practices.
