

Jefferson Cardiovascular Congress

**November 5-6, 2021
Live Meeting**

Course Objectives

At the conclusion of this conference, participants should be able to:

- Explain new guidelines, consensus statements and trends.
- Review the current clinical trial data regarding cardiovascular conditions, devices and drugs that can be translated into clinical practice.
- Review the recommendations for proper care of the patient by providing practical and evidence-based information regarding diagnosis, imaging, patient selection, and management of specific cardiovascular conditions.
- Describe the pathophysiology, quantification and latest surgical and trans-catheter treatments of mitral valve disease
- Identify best practices for the screening and management of diseases involving the aorta.
- Discuss the current surgical and trans-catheter strategies for patients with critical aortic stenosis.
- Review the recent advances in imaging and therapies for coronary artery disease.
- Identify the options for pharmacological and device-related management of heart failure.
