

*2nd Annual Jefferson Urology Symposium:
Emerging Technologies for the Treatment of Benign Prostatic Hyperplasia (BPH)
Friday, February 1, 2019*

Jefferson Alumni Hall
1020 Locust Street, Philadelphia, PA 19107
(on the Center City campus of Thomas Jefferson University)

Course Objectives

At the conclusion of this CME activity, participants will be able to:

- Examine the risks and benefits of minimally invasive therapeutic options available for the surgical management of BPH.
- Review the current authoritative clinical recommendations for the appropriate use of specific technology for the BPH patient.
- Discuss the potential complications of each minimally invasive therapeutic technique and the management of these complications.
- Identify patients for whom minimally invasive therapies are appropriate.
- Develop strategies to implement innovative treatment modalities into practice.
- Assess their individual practice in light of the information and discussions during the workshop, and identify specific strategies to implement as part of a continuing improvement process for their practices.
