Jefferson Thyroid Cancer and Parathyroid Disease Update 2019: Updates in Diagnosis and Treatment

Friday, November 8, 2019

Jefferson Alumni Hall * 1020 Locust Street * Philadelphia, PA 19107

After participating in this CPD activity, participants should be able to:

- 1. Differentiate the need for surgical intervention vs. active surveillance for various thyroid nodules, incorporating various aspects of the nodule characteristics.
- 2. Identify the degree of surgery needed for various types of thyroid cancer and determine when it is appropriate to be conservative or aggressive.
- 3. Determine which patients will benefit from adjuvant therapy including RAI, XRT, and chemotherapy.
- 4. Confidently diagnosis hyperparathyroidism and rule out other causes of hypercalcemia
- 5. Ability to order appropriate imaging studies for localization of parathyroid adenomas and know the differences between these modalities
- 6. Discuss and identify the indications for surgical intervention for primary hyperparathyroidism and the surgical options confidently with patients and other providers.
- 7. Confidently manage post-operative hypo- and hyper-parathyoridism
- 8. Assess their individual practice in light of the information and discussions during the workshop, and identify specific strategies to implement as part of a continuous improvement process for their practices.
