

**Focused Workshop in Endoscopy -
Ablation/Endoscopic Mucosal Resection Techniques**
An In-Depth Review with Live Observation and Hands-On Practice

Tuesday, February 28, 2017

Course Objectives

At the conclusion of this course, participants should be able to:

- Identify patients for whom RFA/Cryotherapy are appropriate.
- Discuss the risks and benefits of these techniques.
- Identify technological advances in RFA/Cryotherapy and analyze how and when new technologies should be incorporated into practice.
- Demonstrate the proper and safe use of the equipment associated with EMR/RFA/Cryotherapy.
- Review current authoritative clinical recommendations for the appropriate use of EMR/RFA/Cryotherapy.
- Review potential complications and their management.
- Examine post-ablation follow-up guidelines.
- Recognize and apply advanced Brush Cytology and VLE technique.
- Assess their individual practice in light of the information and discussions during the workshop, and identify specific strategies to implement as part of a continuing improvement process for their practices.
