

***Inaugural Jefferson Urology Symposium:
Innovations in the Endoscopic Use of the Holmium Laser***

December 8, 2017

Course Objectives

At the conclusion of this course, participants should be able to:

- Examine the advanced endoscopic uses of the holmium laser in urology.
- Discuss the risks and benefits of laser techniques compared to traditional methods.
- Review current authoritative clinical recommendations for the appropriate use of the holmium laser and analyze proper instrument handling and techniques.
- Explain the potential complications of the holmium laser and the management of these complications.
- Develop strategies to implement these new applications of the holmium laser into practice.
- Assess their individual practice in light of the information and discussions during the workshop, and identify specific strategies to implement as part of a continuing improvement process for their practices.
