

Parathyroid & Osteoporosis 2016: New Advances in the Management of Parathyroid Disease & Osteoporosis

November 11, 2016

Thomas Jefferson University - Jefferson Alumni Hall

Learning Objectives

After participating in this CME activity, participants should be able to:

- Individualize therapy based on individual patient needs and prognosis while incorporating new guidelines for management
- Select cost-effective treatments in osteoporosis care
- Inform patients of risks and the likelihood of side effects with different drug therapies
- Prescribe and administer new hypoparathyroidism treatments
- Implement cost-effective treatments in hypoparathyroidism
- Reduce risks of hypoparathyroidism following head and neck surgery
- Analyze pre and intraoperative studies and utilize the data to make cost-effective treatment decisions
- Identify which patients would have the best outcome with parathyroid surgery versus active surveillance
- Assess the cost, side effects and patient preference when developing treatment strategies in the management of both hypo and hyperparathyroidism
- Assess their individual practice in light of the information and discussions during the course, and identify specific strategies to implement as part of a continuing improvement process for their practices
