

3rd Annual Jefferson Renal Update Symposium: Cross-Talk Between the Kidneys and Remote Organ Systems

September 27, 2019

Course Objectives

At the conclusion of this activity, participants should be able to:

- Classify the epidemiology, pathogenesis, and administer the proper treatment for lupus nephritis.
- Discuss the current classification, pathophysiology, and management of acute kidney injury (AKI) in patients with liver cirrhosis.
- Recognize the different kidney pathology seen in patients with chronic infection including Hepatitis C and HIV and how this affects management decisions.
- Differentiate between primary and renal associated hyperparathyroidism and discuss clinical complications that affect CKD patients.
- Classify different types of cardio-renal syndrome and determine the best method of management.
- Outline the spectrum of hypertensive disorders of pregnancy and general management principles.
- Determine strategies to monitor for long-term cardiovascular sequelae.
- Recognize the common acute kidney injury or CKD associated with cancer and cancer therapy.
- Determine the causes of renal disease with a progressive decline in kidney function in non-renal solid organ transplant.
- Identify the criteria for simultaneous organ transplantation.
- Assess their individual practices in light of the information and discussions during the course, and identify specific strategies to implement as part of a continuing improvement process for their practices.
