

51st Annual James LA Roth Visiting Professor Wednesday-Thursday, March 29-30, 2017

LEARNING OBJECTIVES:

At the completion of the course, learners will be able to:

- Identify the risk factors for development of NASH and determine the gene-environment interactions that are involved in disease progression
- Recognize patients with suspected NAFLD and analyze the molecular pathways that drive the disease leading to cirrhosis in patients with NASH
- Review historical therapeutic modalities, examine current management approaches and identify future trends in personalized treatment for NASH
- Utilize an evidence based approach to support pharmacological treatment of NASH and determine when surgical treatment is necessary
- Engage in evidence-based discussions and identify practice pearls that will lead to changes in patient care and improved patient outcomes.
- Assess their individual practices in light of the information and discussions during the course, and identify specific strategies to implement as part of a continuing improvement process for their practices
