

9th Annual Diabetes Symposium: New Advances & Trends

Friday, October 9, 2020

Course Objectives

At the conclusion of the program, the participants should be able to:

- Differentiate older agents from newer ones in the diabetes treatment algorithm.
- Examine the various mechanisms of action, benefits, and side effects of new diabetic therapies.
- Compare consensus algorithms (ADA, AACE) in the treatment of diabetes.
- Select best screening methods and timelines for diabetic nephropathy, retinopathy, neuropathy, and foot disease.
- Assess cardiovascular risks for the diabetic patient.
- Distinguish the various diabetic technologies such as insulin pumps and glucose sensors.
- Assess their individual and/or team practices in light of the information and discussions during the course, and identify specific strategies to implement as part of a continuing improvement process for their practices.
