

7th Annual Philadelphia Spine Summit - Friday, May 14th, 2021
Live Virtual Meeting
Thomas Jefferson University

Learning Objectives

At the conclusion of this activity, participants should be able to:

- Appraise the applications for intraoperative navigation and image-guided robotics in spine surgery.
- Discuss changing reimbursement models and the movement to lower cost facilities.
- Use physical therapy screening tools for surgical candidate selection.
- Explain the indications for medical cannabis use for back pain.
- Debate the challenges in cervical spine surgery.
- Assess the goal of deformity surgery in achieving a balanced spinal alignment, preventing further deformity and alleviating neurological symptoms.
- Review the impact of health care policy changes on the delivery of spine care.
